MedMatch AI

Find the right professional within your own community

MedMatch AI connects healthcare professionals according to specialty, availability, or need, helping the right people find each other within a professional community.

PROFESSIONAL COMMUNITY

Having a network of professionals does not mean leveraging all its **connections**

Healthcare organizations and communities can bring together professionals with different specialties, experiences, and needs.

As the community grows, it becomes harder to know **who can help whom, who is available, or which professional best responds to a specific need.**

The result is a network with valuable connections that often depend on manual searches, personal referrals, or the knowledge of just a few people.

MedMatch AI helps identify and create those connections within the community itself.

Community

Professionals who are already part of the network.

Criteria

Specialty, availability, or a specific need.

Connection

Relevant matches within the community.

From a **need** to a relevant connection

01

Starts from the existing **community**

MedMatch AI works with the professionals who are part of the client's network.

02

Identifies the **need**

The search can consider criteria such as **specialty, availability, or a specific need**.

03

Finds **matches**

The solution identifies professionals within the community who can respond to those criteria.

04

Facilitates the **connection**

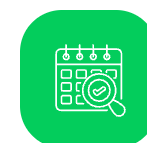

The right people can find and connect with each other more easily, without relying only on manual searches within the network.

A community that is easier to **connect**

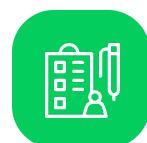

Finds specialists

Makes it easier to search for professionals according to the required specialty.

Considers availability

Allows availability to be included as part of the connection process.

Responds to needs

Professionals can be connected based on an existing need within the community.

Makes better use of the network

Helps uncover connections between people who already belong to the same community but do not yet know each other.

Designed as a product for **professional** communities

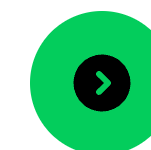

MedMatch AI can be offered as part of an **organization's digital community**, alongside the systems the client already uses.

It does not require **IC One** to work, so it can be implemented as an independent solution within the client's environment.

The organization defines the criteria and needs that guide connections within its professional community.

Digital community

Professionals registered in the client's network.

Connection engine

MedMatch AI finds matches according to the defined criteria.

The value of the community grows when its members can find each other more easily.

Useful connections between members of the same network

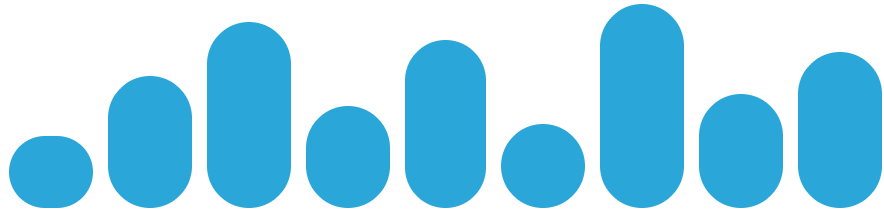

-  Find suitable contacts when the number of professionals makes manual search difficult.
-  Connect multiple specialties within a professional healthcare community.
-  Address needs that could be handled within the existing network itself.

MedMatch AI

Community match

Registered need

Suggested match

Available specialist within the community, associated with the need defined by the organization.

Which organizations is it **designed** for?

MedMatch AI is designed for organizations that manage **communities of healthcare professionals** and need to facilitate connections among their members.

The number of professionals makes it difficult to find suitable contacts.

The network includes multiple specialties and professional profiles.

There are needs that could be resolved within the community itself.

The organization wants to facilitate discovery and connection among members.

The organization wants to bring more value to its professional community.

Make your community's value live also in the **connections** it creates

InterConnecta implements MedMatch AI as a solution for connecting professionals according to the criteria and needs defined for each community.

How many valuable connections could already be inside your network without its members knowing how to find them?
